

I3 Project Client Meeting

Meeting Minutes

Date of meeting – 13/04/2022

Start time – 9:30AM

End time – 9:50AM

Present: Jay, Hannes, Filipe, Isaac

Absentees: Sanjay

Next meeting: TBD

1. Announcements

-

2. Discussion

- Hannes says better for the students to have an account which will be created pre-test
- Need for password recovery
- The account will be generated by the UC and then an email requesting for password creation will be sent to the student
- Because we know their email address once we know their ID, doing it via email not difficult
- Need a database for the accounts
- Need a password policy, especially for the UC's
- If someone has a lot of attempts and fails with inputting a password, it should be noted
- Countdown timer prior to the test, countdown timer during the test
- Folder backed up synchronously or iteratively
- When student submits one last save is done and they lose access to the folder
- Responsibility to do a various level of locks on software/websites (extension)
- Potentially do this with a keylogger but we must notify students that we are tracking what they are doing
- Notifications of announcements from UC/questions from students will just be little flags or banners, not popups
- When students log in its good to see what computer they were logged in on
- We want to send out TXT and PDF files (support notation inside txt file and then maybe pdf as extension)
- Requested specs of the lab computers, will send email to client to get this information so no assumptions must be made.
